INVENTORY CONTROL

Save time and money by getting control of your inventory

Whether or not you already use a computer in some aspect of your business, you can cost justify a whole system and its annual operating costs quite easily by starting to use it for inventory control.

Inventory control in whatever sense it applies to your business can be done manually, of course. But you can almost certainly do it faster, cheaper, and better by automating some or all of the inventory control process.

2 Soft Systems Inventory Control System is a real-time, customizable solution designed to address the needs of small to medium-sized businesses. It also gathers, compiles, analyzes and stores essential business data intelligently, helping managers make better decisions.

All functions are designed to be easy to use and whilst they are tailored to meet localized business needs. It's been engineered for every type of industry and operation, and designed to serve the needs of businesses without the attendant of huge costs or extended implementation time that other software packages required. It integrates and increases the functionality of the Accounts Receivable, Point of Sales, Purchase Order (order management) and Accounts Payable functions. The Inventory Control module is the backbone and a complete real time management of warehouse inventory and location data.

Basic Module

The program is based on advanced relational data base technology (Sybase Adaptive Server Enterprise, SQL) and provides maximum flexibility, ease of use and performance. Inventory Control System include recovery program (Target Locking) for data recovery. Customers may order the Arabic or English version. Either options may be ordered in Single/Multi users, and runs on Windows 98, 2000, XP, 2000/2003 Servers (NT Technology).

The basic program provides complete inventory control and has the following facilities:

* Maintains an inventory file for stock with 14 alphanumeric item codes, Arabic & English item description, item location, item shelf location, Manufacture number, optional item picture
* Unlimited number of stock items
* Multiple warehouse support (Basic module support 10 warehouse)
* 3 levels of selling prices
* Cross reference lookup by vendor part number
* Remote access using microwaves, DSL's, or Dialup connections through PcAnyWhere (in case of a remote locations)
* Maintain items with a weighted average cost
* Items can be discontinued or temporary suspended so that no user can by mistake transact with the item
* Allow to determine the reorder level quantities based on past transaction history
* Maintains multiple packaging units of one item
* Integrates with accounts, order management & Point of Sales systems.
* Material adjustments handling (request user to input code for accounts to receive debit for issues and can be used for material issues for samples or projects etc.)
* Support bar code readers, and bar code data collectors

One Software, One Database, Serving The and Empower Your

☀ Customized security level can be defined for each user (the system log the name of user on all business transaction entered by that user for audit purpose)

System Functions
